WIC
Walsall Inductive Components

Member of Scandinavian Transformer Group

We are based on experience and know-how

WIC was founded in 2008 based on the former Walsall Transformers Ltd.

WIC offers customers a complete range of transformers, chokes and other inductive components. This is possible, because WIC is part of an international group of companies, producing a large variety of different transformers, inductive and wound components. The main production facility and distribution hub for the group is based in Poland, where WIC's parent company Scandinavian Transformer supply its' closely connected partners in the Scandinavian Transformer Group throughout Europe and the USA.

WIC provide among others, the following industries and product groups:

- **Electro Medical:** MR Scanners, Incubators, Heart-Lung machines, Defibrillators, etc.
- **Energy:** Wind turbines, Solar power systems, Fuel cells, Hydro-electric, Geothermal Energy.
- **Communication:** Ship radios, security systems, radar systems and land mobile systems.
- **Measurement and automation:** Robotics, particle accelerators, transducer systems, welding systems and traffic control.

Our relationship with the other partners in the Scandinavian Transformer Group, gives WIC a unique opportunity to be at the cutting edge of the latest developments in the market.

Development that gives both quality and cost effectiveness

Our development and design departments in Poland and Denmark have great experience in all the various aspects of transformers, inductive and wound components.

Our designers take turns at having a seat, as an advisor on the National workgroup that advises the EU chamber of norms and standardization. This give a deep insight in the trends within the development of inductive components.

Our production facilities in Poland are today among the most automated in Europe. For example almost all linear wound transformers can be made on automatic production lines, which is your guarantee of high precision and uniformity. This highly effective production combined with its cost effectiveness makes WIC an attractive partner in both quality and in price.

PRODUCT RANGE:

- 1 Phase EI Transformers
- 3 Phase EI Transformers
- Open PCB
- Encapsulated PCB Transformers
- Toroidal Transformers
- Auto Transformers
- Chokes
- Inductors
- Air Coils
- Linear DC Power Suppliers
- Switch Mode Power Suppliers
- Corona Free Transformers
- Regulating Transformers
- Distribution Transformers
- Oil immersed Transformers
- Cast Resin Transformers
